## Executive Process-level and Individual Task-level Dashboards

In line with our concept of **'one button' deliverables**,

TOPO now has the ability to generate **Standard Operating Procedures (SOP)**, **2D flow chart format process models** and customised business-formatted documents/files as per customer requirements.

WHO ARE WE ?

Partisan is a multi-faceted management consultancy with the experienced resources, proven methods and proprietary tools needed to analyze and improve corporate operations.
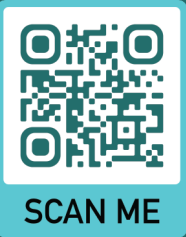

WHAT DO WE DO ?

We provide products and services that help corporations meet requirements, reduce risk and improve productivity.

WHY DOES IT MATTER ?

Our clients benefit from targeted recommendations and solutions that transform and improve how and how well they operate in terms of cost, time and quality.

TRANSFORMATION

DIGITALIZATION

INNOVATION

How ?
How well ?

Partisan Consulting

"We are a tactical consultancy set to help corporations clarify expectations, meet requirements and achieve goals in the most productive manner possible."

Partisan Consulting Ltd.

developed a business analysis engine that facilitates the documentation and analysis of processes and their integrated data elements in a cloud-based, touch-enabled environment.

It was designed to give analysts the ability to quickly capture the full spectrum of process-related data, conduct timed-activity based costing, and highlight query responses and impact directly on interactive, 3D models throughour unique process-as-a-display capabilities.

TOPO - A new dimension in business analysis

The World's First 3D Proprietary Process Capture & Analysis Support

Complete, 7 factor data sets

Seven-factor 'story line' of information about each task (who, what, when, where, why, how, how well)

Flowcharts capture two (what, how)
Swim lanes capture three (what, how, who)

Cloud-based, Software-as-a-Service (SaaS)

Worldwide, internet access with client / sub-client account management support

Secure administration of user rights and privileges at file and field levels

Menu-driven, Executive updates & summaries

Menu-driven queries provide executive status updates and summaries

Charts and histograms are linked by touch with processes to support intuitive, detailed drill-downs on areas of interest

Interactive, object-based 3D process engine

Not just 2D flow symbols presented against a flat-plane horizon

Not just a 3D image viewer

Proprietary Process-as-a-Display (PaaD) capabilities

Shows relevance or impact directly on the process, rather than interpreted dashboards or scorecards

Supports detailed drill-downs on each process object
